

XFI™ ECU With Intelligent Traction Control™ & Internal Data Logging

The new FAST™ XFI™ Engine Control Unit with Intelligent Traction Control™ & Internal Data Logging takes aftermarket EFI engine control to a whole new level by using state-of-the-art predictive software to control excessive tire spin. This predictive software works in conjunction with the most sophisticated electronics in the industry, the FAST™ XFI™. The XFI™ system continually measures driveshaft speed to reduce engine power when traction loss from tire spin is encountered.

The XFI™ delivers racer friendly features, such as four stage power adder control, patent pending trans-brake management, driveshaft and auxiliary shaft rpm inputs and multi-ignition compatibility. The unique Qwik Tune™ Technology, an XFI™ exclusive, allows racers to pre-program four distinct tune-ups for specific track & weather conditions; then instantly switch between them without the use of a laptop computer. Available in both 8 and 16-injector versions, with or without internal data logging, the XFI™ ECU with Intelligent Traction Control™ & Internal Data Logging is simple to use.

- The only EFI system in the industry with intelligent predictive traction control
- Comprehensive selection of harnesses and accessories for 4, 6 and 8 cylinder engines
- Not legal in all sanctioning bodies/classes; check your rules before using

DESCRIPTION	PART NO.	DESCRIPTION	PART NO.
ECU w/ Traction Control, 8 Injectors	301005	ECU w/ Traction Control, Internal Data Logging, 8 Injectors	301007
ECU w/ Traction Control, 16 Injectors	301006	ECU w/ Traction Control, Internal Data Logging, 16 Injectors	301008
