

EFI Perimeter Plate Nitrous System

ZEX™ developed the industry's first complete nitrous system specifically for popular square flange style EFI conversion manifolds. Optimum spray efficiency is assured by placing nitrous and fuel outlets at 12 injection points around the perimeter of the intake manifold opening.

- **Cryo-Sync™ Technology** flows super chilled nitrous through the plate to cool the plate, throttle body & manifold before being injected into engine
- Produces cooler, denser air that benefits horsepower production
- Tunable from 100 to 300 hp
- Compatible with square flange, 4-barrel EFI conversion manifold

Race Perimeter Plate Nitrous System

The ZEX™ Race Perimeter Plate Nitrous System gives you the ability to safely add between 100 to 500 horsepower with this simple, all-inclusive kit. Featuring ZEX™ perimeter plate technology, this system injects nitrous directly into the intake manifold plenum from 360-degrees to smooth out distribution.

- **Cryo-Sync™ Technology** for carb & manifold cooling
- **Smoother** out distribution of nitrous and fuel
- **Square flange** intake manifold application (Dominator base kit also available)
- **Includes everything** needed, including high flow bottle valve, solenoids and 15 lb bottle
