

## New CamQuest™ 6 Cam Selection Software

The new COMP Cams® CamQuest™ 6 PC-based cam selection software allows the user to find the right camshaft by answering a few application-specific questions from the program's simple drop-down menu screen. The program suggests the top matching camshaft for the application, a complete camshaft spec. card and even your engine's projected horsepower and torque, once the camshaft has been installed. Best of all, along with the camshaft recommendations, CamQuest™ also suggests a list of power-matched COMP Cams® valve train components to help generate the best power and overall engine durability.

"The CamQuest 6 Cam Selection Software is a very accurate and easy-to-navigate tool that makes it simple for even first-time users to select camshaft combinations like professionals. When we first received the program we were skeptical, however after checking many of our known engine combinations and cross-checking it with our day-to-day real world dyno results it definitely made believers of our whole crew. This program will, without a doubt, revolutionize the camshaft selection process and remove the intimidation factor that, for decades, has been a part of choosing the proper valve train combination."

-Westech Performance Group

Easy to navigate, pull-down selection menus

Provides best cam choice, spec card and related parts

CamQuest™ even generates hp and torque graphs

- Recommends cams based on criteria selection, provides spec. card and predicts power & torque output
- Use it to compare different types of cams (hydraulic roller to flat tappet to solid roller) to see which best fits your application & requirements
- Works for carbureted, EFI, supercharged, turbo & nitrous applications
- Has a variety of popular head & manifold combinations to choose from, or you can enter exact flow numbers
- Specifies all the related valve train parts needed
- Picks cams for stock replacement to serious race applications and all points between (38 different usage classifications to choose from)
